DIGITAL CRAFTSMANSHIP

Your store isn't mobile optimised. It just fits the screen.

SWIPE ›

THE MYTH

It looks fine on my phone. So it's ready.

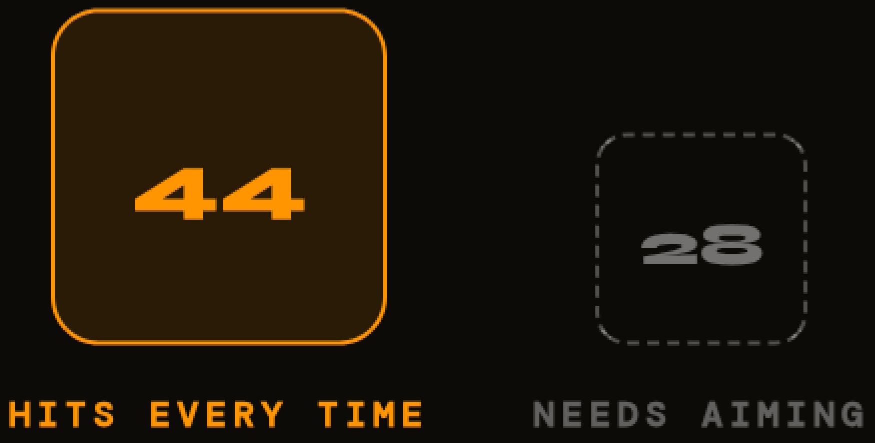
That check tests your layout. It never tests the hand holding it.

THE STANDARD

44pt

APPLE'S PUBLISHED MINIMUM TAP TARGET

Google says 48dp. Both standards are older than your theme. Go measure your swatches against them.



44
HITS EVERY TIME
28
NEEDS AIMING

THE REALITY

Responsive is about the screen. Buying happens in the thumb's reach.

One hand, on the move. That is how your product page actually gets used.

WHERE IT SHOWS UP

Every one of these sits outside the arc.

- ADD TO CART ONLY UP TOP ×
- 28PX SWATCHES ×
- TOP-LEFT FILTER BAR ×
- PINHEAD QTY STEPPERS ×
- CLOSE X IN THE CORNER ×

BUILD THIS INSTEAD

A sticky buy bar in the bottom third. Nothing else fighting it.

THE FILTER

Can you buy it with one thumb, standing up?

If it takes two hands, the layout is the problem. Every click is a choice, so make the choice easy to hit.

Want to know what's out of reach on your store?

I'll check your product page the way your customers actually hold it.
